**Abstract.** The need to realize independently their interests, aptitudes and abilities is a difficult task and it is not always available for every seniors. Therefore, the problem of targeted assistance by a psychologist for preprofile preparation process in school is certainly relevant to the implementation of the young people informed choice of their future profession. Our program of psychosocial assistance to the students for choosing of their profession includes theoretical, diagnostic and training units. The article presents the results of testing and evaluating of the effectiveness of career-oriented block of the training program for students of 9th classes. Comparison of the results of the investigations of the motives for the future profession choice of students before and after the training, demonstrates authentic improving of preparedness for choice, greater awareness and definition.
